Dear Jeff,
As with the Mises Circle before in New York City, I had a great time.

My guess is that most Austrian economists don't understand why mainstream economists go along with macroeconomic hogwash instead of the real science of economics. They can't understand why there is no craziness about the hard science called physics, but there is craziness about the hard science called economics.

I've got news for you. Physicists can be just as crazy and stupid about physics as economists can be about economics. The American Journal of Physics published an absurd article about evolution and the second law of thermodynamics. I tell the whole story at <http://www.pseudoscience123.com>. I've also attached a letter I sent to the CEO of the American Association for the Advancement of Science.

emailed review of Raico 5/5/14 also to colleagues
got response on 5/6/14 and sent him info on Clarke and how to speak to a physicist.
another response and I told him about Nelson

sent review on 4/30/14 with copies to the head of physics depart and others.
Got a polite response saying he would read my review carefully.
