7/9/14 got email and told about the Sternberg affair.  
emailed Setti fax on 7/21/14

This is my answer:

What rule is that? It may be inappropriate to overrule a review that is within the bounds of reason. However, in this case, the reviewer is rejecting my paper because it explains why the Holy Shroud is not authentic. If the reviewers for this workshop are emotionally attached to the authenticity of the Holy Shroud, all of the papers accepted are tainted. I consider it my Christian duty to advise the editor of the IEEE Xplore Digital Library of this shortcoming of ATSI 2014.

I explain in my paper that it is the job of scientists to explain the Big Bang and how humans created the image on the Holy Shroud. Your conduct is similar to the unethical behavior of Richard Sternberg, who edited a peer-reviewed article about evolutionary biology that was published in the Proceedings of the Biological Association of Washington ("The

origin of biological information and the higher taxonomic categories"). It was a review article about the Cambrian explosion, and at the end of the article the author plugged the theory of intelligent design (ID). The peer-reviewers thought this was a harmless philosophical addendum that did not detract from the scientific value of the paper. It became the first peer-reviewed science article arguing in favor of ID. Dr. Sternberg behaved unethically because he should have deleted the reference to ID, or consulted with another editor. He was publicly criticized for his behavior. He could not be fired because his 9 to 5 job was with the Smithsonian Institute.

What happened to him at the Smithsonian Institute shows how much scientists, at least in the United States, hate pro-religion pseudoscience. The title alone of a 26-page congressional report criticizing the Smithsonian Institute tells the whole story: "Demotion and Harassment of Scientist Skeptical of Darwinian Evolution" (December 2006).

Very truly yours, David Roemer
